

My Pets and Garden

CHAPTER 2

Match the Words with the Pictures.

Cactus

Rose

Lavender

Lily

Palm tree

Lemon tree

Jasmine

Rafflesia

Orchid

Lotus

Tulips

Sunflower

Make the Dialogues as the Following Example.

Kai : What plant do you have?
 Jun : I have tulips.
 Kai : How do you take care of
 the tulips?
 Jun : I water it every morning
 and give fertilizer it every
 week.
 Kai : That's great.

Answer the Questions.

1. What flower grows in the pond?
2. What flower has purple color in the garden?
3. What flower has red color in the garden?
4. What flowers have pink color in the garden?
5. What flowers have yellow color in the garden?
6. What flower grows behind the rock?
7. What flowers grow in the pot?
8. What flower has thorn?
9. What flower has spine?
10. What flower smells bad?
11. What flowers have nice fragrance?
12. What flower eats fly?
13. What flower doesn't need much water?
14. What flower always faces the sun?

Read the Text and Answer the Questions.

Cactus

Cactus is a unique plant. It is green and prickly in general. Its stems are different from other plants. The stem is soft because cactus stores the water in it. Unlike other plants, the leaves of cactus is in form of spines. While other plants use their leaves for photosynthesis, cacti turn their leaves into spines to reduce the water loss in hot weather.

The evaporation of cactus is minimal because the surface of the spines is narrow or small. That is why cactus can survive for a long time without water. To get water, the cactus roots spread sideways so it gets water in the soil quickly.

The roots will widen during the rainy season. The water from the soil will be transported to the body for storage. When the weather gets very hot and the soil dries up, cactus cuts off its root.

QUESTIONS:

1. What plant is mentioned in the text?
2. What is the color of cactus in general?
3. What is the difference of cactus stem and other plants stem? ...
4. What is the difference of cactus leaves and other plants leaves?
5. Does cactus turn their leaves into spine to reduce the water loss?
6. Does cactus can survive for a long time without water?
7. Does the cactus roots spread sideways to get water quickly?
8. Does the cactus roots shrink during the rainy season?
9. What cacti do when the weather very hot and the soil dries up?
